Automate your Security Response

What is NewEvol SOAR?

NewEvol SOAR is the Operations Orchestration and Automation tool designed for SOC teams to efficiently respond to plethora of alerts in a very short period of time. The tool provides automatic playbooks, incident triaging and automatic remediation in the real time environment to stay updated with the alerts.

WHY NEWEVOL SOAR?

> Automate repetitive tasks

> Increase SOC efficiency

> Reduce false positives

> Reduce mean time to respond

> Improve SOC ROI

KEY FEATURES

> 20+ automatic reputation check

> Quick deployment

> In and out details of steps involved in playbook

> Customized reports

> Advanced dashboards

KEY BENEFITS

> Integration with third-party IT/IoT tools with NewEvol SOAR

> Multi-tenant environment

> Visual playbook designer

> Automated response

> 50+ playbooks out of the box

SOAR Uniqueness

CUSTOMIZABLE PLAYBOOKS

NewEvol SOAR comes with 50+ playbooks out of the box for automated action on the threats detected. With available playbooks, it also provides custom playbook development for user-oriented use cases. Now, build customizable processes that automate everything from internal validation to remediation with simple drag and drop.

OPEN API ARCHITECTURE

Integrate other important security tools in your environment with NewEvol SOAR. With this our open API architecture, any third-party SCADA/IT or IoT tools can be integrated as a part of security operations automation.
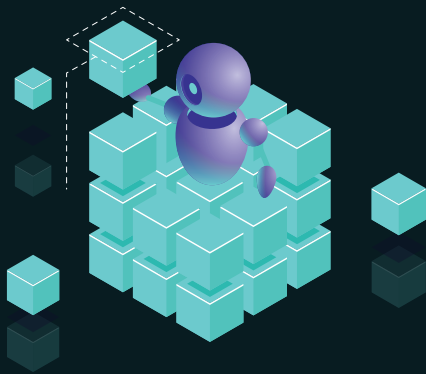

FLEXIBLE DEPLOYMENT

NewEvol SOAR provides multi-environment deployment options. Thus, allowing to orchestrate across cloud, on premise and hybrid environments to avoid limitation on the architecture deployment options.

How Does it Work?

NewEvol SOAR workflow in three steps.

ORCHESTRATE

It achieves orchestration through integrating disparate tools together to function together to address the overall network environment in a more systematic manner.

AUTOMATE

Once orchestration has been achieved, NewEvol SOAR then does the automation to accomplish a wide range of tasks, including eliminating repetitive tasks performed by an analyst. Thus, helping analysts save a lot of time and effort in reducing false positives.

RESPOND

With orchestration and automation acting as a base, NewEvol SOAR is able to respond with much greater accuracy and efficiency. With automated playbooks, the incidents that took hours to respond, are now achieved within minutes.

Deployment Options

| On Premise Dteployment | Cloud Deployment | Hybrid Deployment |

NewEvol SOAR can be deployed via multiple configurations including On-Premise, Cloud and Hybrid. We offer the platform in multiple tiers to fit your needs.

INFRASTRUCTURE REQUIREMENT

Minimum NewEvol SOAR Server Requirement

SERVER	CORE	RAM	HDD
NewEvol SOAR instance	12	32	800 GB
